

Interview Accelerator — Demo Video Script

EDXSO AI Product Engineer Intern · Assignment 3

Target length: **100–110 seconds** · Browser: **Chrome** · Mode: screen + mic

Live: <https://edxso-interview-accelerator.vercel.app>
GitHub: <https://github.com/nishant-uxs/edxso-interview-accelerator>

0. Shoot se pehle (30 sec setup — record mat karna)

- Chrome open karo; mic + camera permission allow.
- JD text ready (paste); resume PDF ready (Nishantag Resume.pdf).
- Quiet room; 1080p screen record (Win+G / OBS / Loom).
- Tab pe sirf live app; bookmarks bar hide (F11 optional).

1. Shot-by-shot script (time · bol · dikha)

Time	Bol (VO / live)	Screen pe kya dikhana / karna
0:00–0:12	Bol: “This is Interview Accelerator — EDXSO Assignment 3. Stack: Next.js App Router, TypeScript, Tailwind, deployed on Vercel. LLM is Gemini via the OpenAI-compatible API.”	Dikha: Home / Input screen. Top title + GitHub link 1 sec highlight. Cursor slow, no rush.
0:12–0:24	Bol: “Input accepts paste or file upload. PDFs go through unpdf on the server, DOCX through Mammoth, then we clip and send JD plus resume to slash api slash analyze.”	JD textarea mein paste.
Resume pe PDF choose (file name dikhe). Click: Start Analysis “Analysing...” dikhne do.		

Time	Bol (VO / live)	Screen pe kya dikhana / karna
0:24– 0:36	Bol: “Analyze returns structured JSON — role breakdown, candidate strengths and gaps, claims to probe, and a job-fit score. That is Step 1 and 2 of the product.”	Role screen.
	Scroll: Re- quired skills, Pre- ferred, Techni- cal + Be- havioural compe- tencies, Respon- sibilities. Click: See candidate fit	
0:36– 0:50	Bol: “Interview is not a fixed question bank. Slash api slash interview slash next takes analysis, transcript history, and the last answer, then generates the next question for screening, competency, and deep-dive.”	Fit screen: big % score, Strong / Partial / Missing, Claims to probe.
	Cursor se score + missing gaps pe light hover. Click: Start AI voice interview	
0:50– 1:05	Bol: “Voice loop is browser-native: speechSynthesis for TTS questions, Web Speech API for STT answers. Optional getUserMedia camera booth — scoring stays answer-quality first.”	Interview screen: Level pill + Progress $x/9$.

Time	Bol (VO / live)	Screen pe kya dikhana / karna
AI question TTS se sunne do (1–2 sec). Click: Speak answer — 20–25 sec clear answer. Transcript side update dikha.		
1:05– 1:18	Bol: “Questions are personalised to my resume. The next question reacts to my previous answer across three levels.”	Second question aane do (adaptive follow-up).
Ek aur short voice / typed answer. Optional: Click: Enable video 2 sec — camera booth. Click: End & evaluate		
1:18– 1:32	Bol: “After the session, slash api slash interview slash evaluate scores overall plus seven competencies, question-level feedback, prep gaps, and readiness.”	Report screen.
Overall score + readi- ness pill. Competency cards scroll.		

Time	Bol (VO / live)	Screen pe kya dikhana / karna
Strengths / Weak- nesses. One Prepara- tion gap open. One Question- level feedback block.		
1:32– 1:42	Bol: “You can export a shareable PDF report with jsPDF — scores, gaps, and per-question feedback.”	Click: Download report PDF
Downloads bar / file name 1–2 sec dikha.		
1:42– 1:50	Bol: “Architecture is three API routes plus a thin client: analyze, adaptive next-question, evaluate. Live on Vercel, source on GitHub. Full flow: ingest, fit, adaptive voice interview, report. Thanks.”	URL address bar dikha.
GitHub link pe last hover. Freeze 1 sec — end.		

2. Continuous VO (copy-paste teleprompter)

This is Interview Accelerator — EDXSO Assignment 3. Stack: Next.js App Router, TypeScript, Tailwind, deployed on Vercel. LLM is Gemini via the OpenAI-compatible API.

Input accepts paste or file upload. PDFs go through unpdf on the server, DOCX through Mammoth, then we clip and send JD plus resume to `/api/analyze`.

Analyze returns structured JSON — role breakdown, candidate strengths and gaps, claims to probe, and a job-fit score. That is Step 1 and 2 of the product.

Interview is not a fixed question bank. `/api/interview/next` takes analysis, transcript history, and the last answer, then generates the next question for screening, competency, and deep-dive.

Voice loop is browser-native: `speechSynthesis` for TTS questions, Web Speech API for STT answers. Optional `getUserMedia` camera booth — scoring stays answer-quality first.

Questions are personalised to my resume. The next question reacts to my previous answer across three levels.

After the session, `/api/interview/evaluate` scores overall plus seven competencies, question-level feedback, prep gaps, and readiness.

You can export a shareable PDF report with jsPDF — scores, gaps, and per-question feedback.

Architecture is three API routes plus a thin client: analyze, adaptive next-question, evaluate. Live on Vercel, source on GitHub. Full flow: ingest, fit, adaptive voice interview, report. Thanks.

3. Tech callouts (on-screen captions — optional)

When	Caption text
0:00	Next.js + TypeScript + Tailwind · Vercel
0:12	unpdf / Mammoth → <code>/api/analyze</code>
0:36	Gemini · adaptive <code>/api/interview/next</code>
0:50	Web Speech STT/TTS · <code>getUserMedia</code>
1:18	<code>/api/interview/evaluate</code>
1:32	jsPDF report export

4. Sample answers (mic pe bolne ke liye)

Answer 1 (EDXSO / LLM)

“I built EDXSO influencer outreach to personalise messages with an LLM. I used retrieval over influencer profiles, crafted prompts for tone matching, and exposed a FastAPI endpoint so the team could generate drafts faster without losing quality.”

Answer 2 (RAG follow-up)

“For the RAG prototype I chunked profiles, embedded them, retrieved top-k context, then prompted the model. For a demo I used an in-memory store; production mein main vector DB, evaluation labels, aur campaign-specific templates add karta.”

5. Checklist before upload

- Full journey dikhta hai: Input → Role → Fit → Interview → Report → PDF
- Kam se kam **1 voice answer** clear sunaai de
- Adaptive next question visually clear ho
- Live URL + GitHub frame mein aaye
- Video 2 min se kam; noise / tab switching nahi
- Upload: YouTube unlisted ya Drive link (anyone with link)

6. Submission pack

1. Live app URL

2. GitHub repo
3. README (architecture + voice + evaluation)
4. This demo video
5. (Optional) Downloaded sample report PDF attach

Director's note: ek clean take. Galati ho to dubara start — cut mat jodna zyada.
